

DIGITAL DESIGN PROCESS

WHEEL RIM DEVELOPMENT

**YOUR GLOBAL MOBILITY
ENGINEERING EXPERTS**

In wheel rim development, requirements for top visual quality, appearance and performance of the product are bundled in a very small space. EDAG's experts help to design a product that meets all requirements in terms of form and function, but also technical feasibility.

Throughout the process, we support you from the first draft to the final fine-tuning with our extensive know-how, to ensure that all criteria for series production are met. Here, we draw on experience we have gained with cast, forged, but also carbon wheel rims.

Our specialists make a lean process tailored to the customer's needs possible, in order to provide the desired result in the shortest possible time.

Any how small or large your project is makes no difference to us. We make it possible.

Our services:

- Styling
- Concept surfaces
- Poly modeling
- Class A surfaces
- Visualization
- Model building
- Clay modeling
- 3D printing
