

SMART FACTORY PLANT ENGINEERING

EDAG Production Solutions GmbH & Co. KG offers complete developments for sustainable production systems in **plant engineering**, and provides turn-key, customised production solutions from a single source.

MAKING IDEAS PERFORM

Smart Factory Plant Engineering

Smart Factory Plant Engineering has unbeatable expertise in its product and sector. We are the specialists in designing production systems. Together we realize your optimal production solution.

Our plant engineering portfolio

- System analysis to determine the relevant parameters
- Concept development for transparent indication of potential costs/benefits.
- Function-oriented mechatronic development
- Virtual validation
- Safety-related validation
- Commissioning and testing at our premises
- Delivery of ready-to-use production solution
- Ramp-up management

Our **plant engineering references** range from automated cells (with and without robots), the optimisation of manual workstations and realisation of suitable production equipment for improved efficiency and quality levels to human-robot coupled systems.

Advantages with plant engineering

- Guaranteed Depreciation
- Supplier-independent system component selection, tailored to your requirements
- Investment commitment for hardware at the latest possible date
- From the idea through to hand-over of the plant - consistency from a single source
- Safe and CE-complaint

Together we develop and realize your individual production solution.
