

# SMART MAINTENANCE

Successful, efficient and schedule-oriented project management with **smart maintenance**. EDAG Production Solutions GmbH & Co. KG offers complete solutions for sustainable production systems and is the perfect interface between product development and plant engineering.

## YOUR GLOBAL MOBILITY ENGINEERING EXPERTS

### Smart Maintenance

In the context of the smart factory, we help you to optimise your maintenance processes. The basis here is the **smart maintenance** control cycle, which involves:

- 1) Forecasting necessary maintenance work
- 2) Guided search for errors, provision of knowledge base and documentation for the upcoming maintenance work
- 3) Feedback of the results into the self-learning system

Throughout the process, we take all phases of the IT product development process into account, from order clarification, requirements management and concept development, system design and implementation to the maintenance of the applications we have developed.

Make use of the potential of our experienced experts with their close ties to production, to ensure that your project is completed successfully, efficiently and on schedule.

### Range of services

- **Predictive maintenance**  
for forecasting future faults
- **Knowledge management**  
simplified troubleshooting
- **Mobile devices**  
the right information, anywhere, any time
- **Remote maintenance**  
the expert is in-house at all times

### Your advantages

- All phases of the IT product development process
- Combination of consulting, IT and engineering know-how
- Consistency from shop floor (plant) to top floor (management)
- Validated, fully integrated IT concept
- Free product choice
- More than 45 years' design experience
