

# RAMP UP & SERIES SUPPORT

## PRODUCT ENGINEERING

**YOUR GLOBAL MOBILITY  
ENGINEERING EXPERTS**

The design and production of vehicles is a complex and fault-prone process. Short development cycles, an increasing derivative variety and individualization are some of the reasons why faults occur in vehicles.

Together with the OEMs, we take care of faults that occur and carry out field observations for problems solving as change management, deviation control and release.

- OEM's standards

### Contact:

**EDAG Mexico**

Email: [sales@edag.com.mx](mailto:sales@edag.com.mx)

### Benefits:

- Fluid model launch
- 100% overlap and smooth transition to series
- Assure the new components within specifications
- Support all activities for a flawless launch project
- Series support to solve problems and perform optimizations

### Added Value:

- High flexibility
- Fast reaction to support with multidisciplinary and high skilled team
- Faultless products
- Avoid delays and reworks
- PQC integrated solutions with services for suppliers
